UI / UX DESIGN INTERN

Design & Research Track

Competitive UX Audit Swiggy • Zomato • Uber Eats	**User Personas** Student • Working Professional
Core User Flow Sign-up → Onboarding → Dashboard	**Design System + Review** Findings • Wireframes • Learnings

Prepared by: Yashi Gupta

Scope note: This submission uses the food-delivery benchmark set provided in the working draft: Swiggy, Zomato and Uber Eats. Where the internship brief refers to an assigned product, the benchmark set should be replaced if the mentor has assigned a different domain.

01. Competitive UX Audit

Objective: benchmark three direct competitor products and identify usability strengths, pain points and opportunities.

Products chosen: Swiggy, Zomato, Uber Eats

Audit areas: onboarding flow • navigation patterns • key user journey • Nielsen usability heuristics

Method: desk review of the visible product experience; observations are qualitative rather than a statistical usability study.

Product	Onboarding	Navigation	User journey	UX observation

Swiggy	Quick sign-up; promotional/pop-up content can compete for attention.	Bottom navigation with familiar sections and icons.	Food search → restaurant → item → cart → checkout.	**Pain point:** visual density can make the first-time experience feel busy. **Standout:** clear access to ordering and order-related areas.
Zomato	Clear entry points and prominent calls to action.	Tab-based navigation and category-led discovery.	Search/discover → restaurant → menu → cart → checkout.	**Standout:** clear hierarchy for discovery and actions. **Pain point:** multiple promotional choices can compete for attention.
Uber Eats	Login/account step is prominent; guest access may be limited depending on flow/version.	Some secondary functions are placed behind menus, requiring extra discovery.	Search → store/restaurant → item → cart → checkout.	**Pain point:** less-visible secondary navigation can add discovery effort. **Standout:** familiar ordering structure.

01A. Navigation & Key User Journey

The goal is not to declare an overall winner, but to document different interaction patterns and their implications.

Stage	Swiggy	Zomato	Uber Eats
1. Discover	Home/search and category discovery.	Search/discovery-led entry.	Search and category/store discovery.
2. Select	Restaurant → menu → item.	Restaurant → menu → item.	Store/restaurant → menu → item.

3. Review	Cart and checkout review.	Cart and checkout review.	Cart and checkout review.
4. Track	Order status/tracking.	Order status/tracking.	Order status/tracking.

Pain-point themes

• Information density: too many competing cards, offers or prompts can increase cognitive load.

• Navigation discoverability: functions hidden behind secondary menus require more effort to find.

• Action clarity: primary CTAs should remain visually and verbally obvious at each stage.

Standout UX themes

• Consistent navigation patterns reduce the learning curve.

• Clear status visibility helps users understand what is happening after checkout.

• A predictable order flow supports fast completion of the primary task.

01B. Nielsen Heuristic Evaluation

Selected observations mapped to common usability heuristics. Severity is intentionally kept qualitative.

Heuristic	Observation	Example	Suggested improvement
Visibility of system status	Order progress/status should remain easy to find after checkout.	Zomato-style clear delivery status visibility.	Keep order status visible from the main order area and use clear status labels.
Consistency & standards	Navigation patterns and controls should behave consistently.	Consistent tabs/icons reduce relearning.	Use one interaction pattern for repeated navigation actions.
Error prevention	Checkout should reduce accidental duplicate actions.	Cart/checkout confirmation before final order.	Use clear final-review state and disable repeated submission while processing.

Recognition rather than recall	Users should see categories and actions instead of remembering where they are.	Category-led discovery.	Keep common categories, search and recent actions visible.
Aesthetic & minimalist design	Promotional content can compete with the primary task.	Dense home surfaces can feel busy.	Prioritize primary task actions; group secondary promotions.
User control & freedom	Users need clear ways to go back, edit cart and change choices.	Editable cart/checkout states.	Provide obvious edit/back controls without losing entered data.

Note: The full Nielsen set contains 10 heuristics; this report records the heuristics most directly relevant to the benchmark observations. If the mentor expects a full 10/10 checklist, use the appendix checklist below.

01C. Nielsen's 10-Heuristic Checklist

#	Heuristic	What to check
1	Visibility of system status	Check whether users always know what is happening.
2	Match between system and real world	Use familiar words, concepts and ordering.
3	User control and freedom	Provide clear back/edit/undo paths.
4	Consistency and standards	Keep terminology and controls consistent.
5	Error prevention	Prevent mistakes before they occur.
6	Recognition rather than recall	Show choices instead of requiring memory.
7	Flexibility and efficiency of use	Support both new and frequent users.
8	Aesthetic and minimalist design	Remove unnecessary information competing with the task.

9	Help users recognize, diagnose and recover from errors	Make errors clear and actionable.
10	Help and documentation	Provide accessible help when users need it.

02. User Persona Development

Two representative personas are based on the working draft and are intended to guide design decisions rather than represent a statistically validated population.

P Aarav • College Student

Tech-savvy • frequent mobile user

Goals
Quick, affordable meals; easy discovery

Frustrations
Long delivery times; unexpected fees

Behaviours
Orders late night; compares prices; prefers mobile

Devices
Android phone

P Riya • Working Professional

Busy lifestyle • office-hour ordering

Goals
Healthy lunch options; reliable delivery

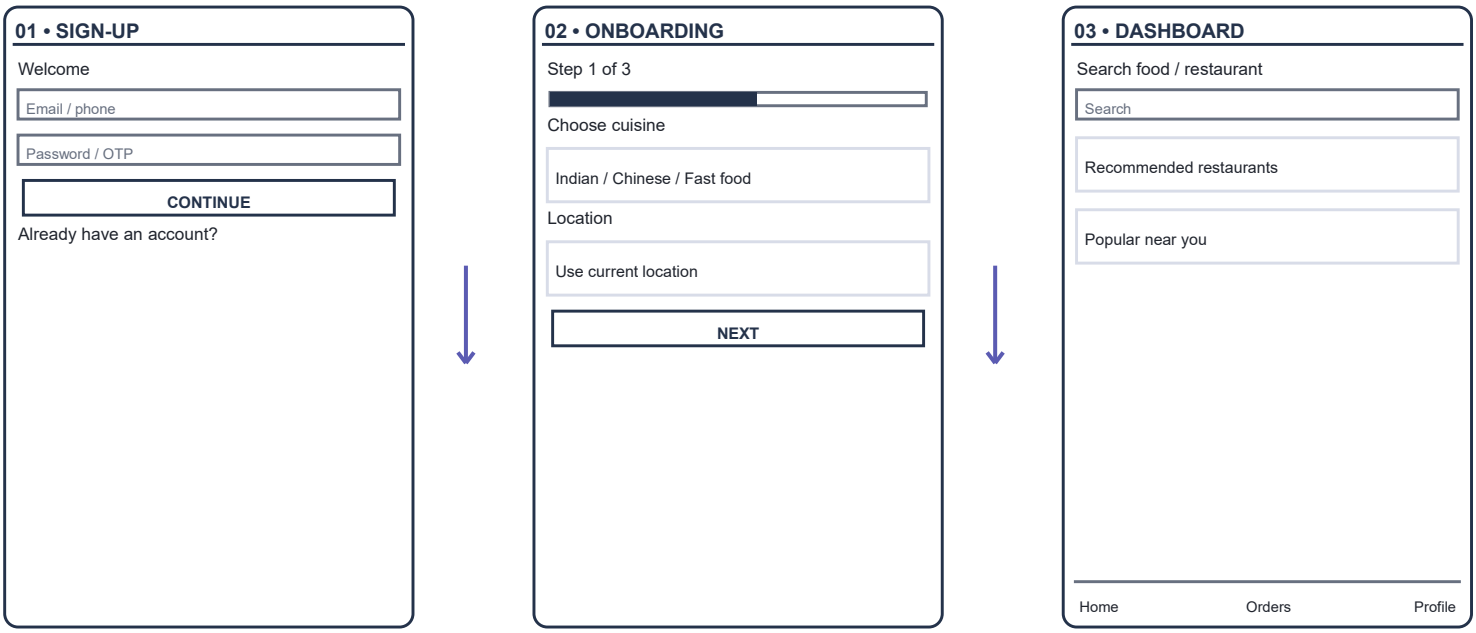

Frustrations
Confusing offers; limited time

Behaviours
Orders during office hours; values quick reordering

Devices
iPhone + laptop

03. Wireframe — Core User Flow

Low-fidelity structure only. Flow: Sign-up → Onboarding → Dashboard. Use this as the wireframe specification when recreating it in Figma.

Figma build checklist

• Create 3 frames: Sign-up, Onboarding and Dashboard.

• Use rectangles, text, simple input fields and arrows only.

• Keep spacing and hierarchy readable; avoid final colours, images and decorative styling.

• Connect the frames in prototype mode if requested by the mentor.

Figma shared link: Add your Figma file link after recreating these wireframes in your account.

04. Design System Exploration

Review the existing Figma component library for the assigned flow and document inconsistencies or missing components.

Finding	Why it matters	Recommended action

Button inconsistency Rounded and square button styles appear as different patterns in the working notes.	Different visual treatments for the same action can make the interface feel inconsistent.	Define one primary button style and document when secondary styles are allowed.
Missing component Order Tracking Card	Tracking is a key post-purchase state; a reusable component can keep status information consistent.	Create a reusable card with order ID, current status, ETA and next action.

Annotated screenshot requirement

For the final internship submission, add one screenshot from the assigned Figma component library and annotate the inconsistent button styles and the missing Order Tracking Card. The table above can be used as the accompanying note.

ANNOTATED DESIGN-SYSTEM REVIEW

[Screenshot of assigned Figma component library]

① Inconsistent button treatment → standardize primary action

② Missing Order Tracking Card → add reusable component

05. Week 1 Design Review — 5-Slide Presentation

These five slides summarize the audit, personas, wireframes and learning points for the design review.

SLIDE 1

Week 1 Design Review

• UI / UX Design Intern

• Design & Research Track

• Yashi Gupta

SLIDE 2

Competitive UX Audit — Key Findings

- Swiggy: information density can compete with the primary task.
- Zomato: clear discovery and action hierarchy.
- Uber Eats: some secondary navigation requires more discovery.
- Common opportunity: simplify onboarding and keep primary actions obvious.

SLIDE 3

User Personas

- Aarav — College Student: quick, affordable meals; mobile-first.
- Riya — Working Professional: healthy lunch; time-sensitive ordering.
- Design implication: support fast discovery, clear pricing and easy reordering.

SLIDE 4

Core User Flow — Lo-fi Wireframes

- Sign-up → Onboarding → Dashboard
- Screen 1: account fields + CTA.
- Screen 2: cuisine/location/payment steps + progress.
- Screen 3: search + recommended content + bottom navigation.

SLIDE 5

Learnings & Next Steps

- Keep onboarding focused and easy to scan.
- Use a consistent design system for repeated components.
- Make order status visible and actionable.
- Next step: translate validated wireframes into hi-fi mockups after feedback.

06. Submission Checklist

Use this checklist before submitting Week 1.

✓	Task	Check
■	Task 1	Competitive UX Audit report exported as PDF / Notion
■	Task 1	Three direct competitors analysed with onboarding, navigation and journey findings
■	Task 1	Pain points + standout moments documented
■	Task 1	Relevant Nielsen heuristics mapped to findings
■	Task 2	2–3 persona cards created in Figma/PDF
■	Task 3	Three low-fidelity wireframe screens recreated in Figma
■	Task 3	Figma shared link added
■	Task 4	Design-system screenshot from assigned Figma library added and annotated
■	Task 5	Five-slide review deck / Loom walkthrough prepared
■	Final	All files checked against the 22 September 2026 deadline

THANK YOU…SsS
